## Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology)

A growing proportion of the world's population is dependent on **Seawater Desalination** as a source of fresh water for both potable and civil use. One of the main drawbacks of conventional desalination technologies is the substantial energy requirement, which is facing cost increases in the global energy market. "**Seawater Desalination**" presents an overview of conventional and non-conventional technologies, with a particular focus on the coupling of renewable energies with desalination processes.

The first section of this book presents, in a technical but reader-friendly way, an overview of currently-used desalination processes, from thermal to membrane processes, highlighting the relevant technical features, advantages and disadvantages, and development potential. It also gives a rapid insight into the economic aspects of fresh water production from seawater.

The second section of the book presents novel processes which use **Renewable Energies** for fresh water production. From the first solar still evaporators, which artificially reproduced the natural cycle of water, technology has progressed to develop complex systems to harness energy from the sun, wind, tides, waves, etc. and then to use this energy to power conventional or novel desalination processes. Most of these processes are still at a preliminary stage of development, but some are already being cited as examples in remote areas, where they are proving to be valuable in solving the problems of water scarcity.

A rapid growth in these technologies is foreseen in the coming years. This book provides a unique foundation, within the context of present and future sustainability, for professionals, technicians, managers, and private and public institutions operating in the area of fresh water supply.

### **From reader reviews:**

#### **John Loya:**

Do you have favorite book? Should you have, what is your favorite's book? Publication is very important thing for us to be aware of everything in the world. Each publication has different aim or even goal; it means that e-book has different type. Some people experience enjoy to spend their time to read a book. These are reading whatever they take because their hobby is actually reading a book. Why not the person who don't like studying a book? Sometime, person feel need book when they found difficult problem or even exercise. Well, probably you'll have this Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology).

#### **Jeannette Coleman:**

With other case, little people like to read book Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology). You can choose the best book if you want reading a book. Given that we know about how is important any book Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology). You can add information and of course you can around the world by just a book. Absolutely right, because from book you can know everything! From your country until finally foreign or abroad you will be known. About simple issue until wonderful thing you are able to know that. In this era, we are able to open a book or even searching by internet gadget. It is called e-book. You may use it when you feel uninterested to go to the library. Let's learn.

#### **Adriana Phillips:**

Beside this kind of Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) in your phone, it could possibly give you a way to get closer to the new knowledge or information. The information and the knowledge you can got here is fresh from the oven so don't become worry if you feel like an previous people live in narrow community. It is good thing to have Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) because this book offers for your requirements readable information. Do you sometimes have book but you would not get what it's interesting features of. Oh come on, that wil happen if you have this within your hand. The Enjoyable blend here cannot be questionable, just like treasuring beautiful island. So do you still want to miss this? Find this book and read it from currently!

#### **Wendy Clark:**

Don't be worry for anyone who is afraid that this book will probably filled the space in your house, you might have it in e-book way, more simple and reachable. This Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) can give you a lot of good friends because by you looking at this one book you have point that they don't and make you more like an interesting person. This kind of book can be one of one step for you to get success. This e-book offer you information that

maybe your friend doesn't know, by knowing more than other make you to be great individuals. So , why hesitate? Let's have Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology).
